## Flexible Solution

The GBA ST1+ offers a compact Up, Down or Horizontal note stacking solution, designed particularly for the Vending and Self-Service sectors. It is a global product that can be used in all International markets through the simple change of a note guide. Accepting up to 32 different note denominations the GBA ST1+ is well suited for large and multi-currency applications. Available with all industry standard protocols, the GBA ST1+ is an adaptive solution to any bank note validation requirement.

## Direct USB Connectivity

The GBA ST1+ benefits from direct USB connectivity to PC based host machines. Utilising the serial based communication protocols RS232 or ccTalk, the GBA ST1+ can be simply integrated via a .NET software development kit. It's USB port can also be used to download new software, firmware, or validator configuration via any common USB drive.

## Maintenance Friendly

A tri-colour illuminating note guide indicates the status of the unit at all times and a diagnostic LED provides detailed information of any errors. Benefitting from tool free access to the main note path, any potential jam can be cleared by hand, removing the need for skilled service engineers. The GBA ST1+ contains recessed sensors, preventing dust build up, and features auto-calibration to ensure the unit remains at optimum performance at all times.

## Safe and Secure

The GBA ST1+ can be fitted with either a 100, 300, 600 or 1000 note capacity cash box. Each cashbox can be fitted with dual cam locks to provide a tamper evident, secure solution to cash collection. Using various wavelengths of colour, the GBA ST1+ utilises a "Sense" network to provide a powerful discrimination technology, resulting in excellent first time note acceptance whilst guarding against false notes. The inclusion of both optical and mechanical anti string gates ensures accepted notes remain in the cash box.
